

Hibernating

The device should be **hibernated** each time it is left unattended whilst under a log in. For example, once medication has been dispensed into the **cup** you should hibernate the device before going to administer to the resident. Anyone can log back in (under their log in) and finish off the round if necessary.

Click on the **Hibernate** icon in the top left corner of the screen.

eMARx in Hibernate Mode

Username

Password

An **eMARx in Hibernate Mode** box will appear asking for a log in and password. Log back in when ready. The screen will revert to what it was before being hibernated.

The same person does not have to log back in. Anyone else who logs back in will then be under their own log in.
