Office – Installing eMAR Office

This is step by step guide to install eMAR office onto your laptop or PC.

The email you receive has all the information you need to set up eMAR Office.

1. Installer Link
2. eMARxID
3. Password

Hi eMARx User,

Below is the eMAR office installer link. When installing you may need an administrator passw…

Once installed, you'll be asked to input a **onetime** eMARx ID and password, this login can also…

Installer: https://www.systema-solutions.co.uk/downloads/eMAR/EMarOffice3_001A.msi

eMARxID: DEM0123
Password (case-sensitive): PA55W0rD

Kind Regards,

The installer link, which upon clicking will start downloading the installer.

The eMARx ID and password is used as a onetime login you need to use to register your laptop with the main database to receive all correct data specifically for your home.
This is only needed once during installation. When installed, you can continue to log in with your normal eMAR login.
The first step is to follow the installer link.

Your browser may warn you the file is not safe; we can assure you that the installer is safe. If this happens to be the case, just click the keep button and the download will proceed.
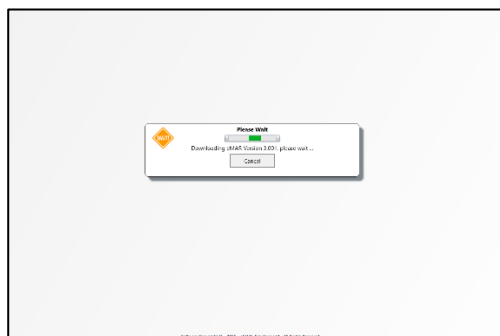

Once downloaded run the installer.

Windows Defender may mark this down as unsafe. To override this, click the More Info button and an option will appear at the bottom allowing you to Run Anyway.

Before the installer starts running Windows may ask you for an Administrator password if you are not an admin on the device you are using.

If you are unaware of the password you will need to contact your IT department for this password.

The eMAR Installer will begin downloading and installing the software.

You will then be prompted to enter the one time login sent in the email.

Fill that out accordingly and press save.

eMAR will reload with your care home data.

Now you can login with your normal eMAR staff login to finalize the installation.

When you have successfully logged in, the installation is completed.

Should you have any issues during the installation, contact Technical Support by raising a ticket or calling us.
