

Stock Control – Creating a GP Link

You can create a direct link to a GP website from within the stock control section within eMARx.

To create a link to your GP website you will need to contact the support desk with your request and the website address.

Once that has been set up you can use this feature as follows....

Go to Stock Control.

And now this icon will be shown on the left-hand side. By clicking on this, you will be able to access the GP website straight away.
